DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- IA. Claims 1-3 and 5-12, drawn to a filter for a printhead assembly, classified in class 347, subclass 93.
- IB. Claims 25-27 and 29-32, drawn to a printhead assembly, classified in class 347, subclass 20.
- IC. Claims 33-35 and 37-40, drawn to a method of supplying liquid ink to a printhead assembly, classified in class 347, subclass 85.

The inventions are distinct, each from the other because of the following reasons:

1. Inventions IB and IA are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because US patent 5,389,962 to Sekiya et al. discloses an ink jet recording head unit that has no filter (Fig. 11). The subcombination has separate utility such as filtering compressed air from a pump as disclosed in US patent 4,223,324 to Yamamori et al.

Because these inventions are distinct for the reasons given above and the search required for Group IB is not required for Group IA, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

2. Inventions IB and IC are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the process as claimed can be practiced by another materially different apparatus such as using the vacuum source (Fig. 1) in the method for refilling fluid into a continuous ink jet fluid system disclosed in US patent 5,396,268 to Mader et al.

Because these inventions are distinct for the reasons given above and the search required for Group IB is not required for Group IC, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

Art Unit: 2853

or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
